

# Hair Colouring

Some people now are colouring their heads... and I found that some of them are becoming blind. So I said... why are you doing it... they said 'what's wrong' - why do you want to colour your hair... it will make you blind. We are human beings... we have got cells here (top of the head - Ed) which absorb paints and that can go onto our nerves... can go also onto our other centres (870500)
